

KSN 2017 Abstract

Basic renal pathology: Practical approach of glomerular disease

Ahrim MOON

Department of Pathology, Soonchunhyang University Bucheon Hospital,
Korea, South

This lecture handles basic renal pathology focusing on glomerular diseases. We will make an effort to provide practical benefits for nephrologists. We will use an ordered approach starting with a description of how renal tissue must be processed. And then, we will see general concepts and approaches to the diverse renal diagnosis of pathology focusing on glomerular disease. Finally we will solve some basic and practical cases of glomerular diseases. This lecture will help nephrologists to improve understanding of pathologic diagnosis and status of their patients.
