

KSN 2017 Abstract

electrolytes and beyond: new meanings of sodium and potassium as biomarkers

*Sejoong KIM

Internal Medicine, Seoul National University Bundang Hospital, Korea, South

Hyponatremia and hyperkalemia are common clinical disorders in real world. Recent clinical studies demonstrated that they are associated with renal outcomes and patients' outcomes, as well as simple electrolyte disorders. This topic will deal with new meanings of sodium and potassium as biomarkers of short-term renal outcomes and mortality.
