

KSN 2017 Abstract

Access Flow Surveillance and Vascular Access Outcome.

Nicolai Krivitski

Transonic Systems, Inc., USA

Different methodologies of access flow measurements during hemodialysis will be examined. Recent flow surveillance guidelines from different countries will be compared. Main randomized control trails will be analyzed from nephrologist and interventional radiologist points of view. Major reasons of success or failure of flow surveillance will be examined and recommendations discussed. The worldwide picture of flow surveillance will be presented.
