## 우리나라 투석 환자 발병률 및 유병률(Trends in Incidence and Prevalence of End-Stage Kidney Disease in South Korea: Challenges and Perspectives)

**Kipyo Kim**

*Inha University Hospital, Republic of Korea*

---

This presentation covers the recent trends in epidemiology of dialysis patients in Korea and discuss the data collection methodology that will be implemented starting this year. Additionally, we review international registries for ESKD, highlighting their strengths and limitations. Through this analysis, we propose directions for improving the Korean registration system, aiming to enhance the quality, clinical utility, and policy relevance of dialysis data collection in Korea.

**Keywords:** end stage kidney disease, epidemiology, KORDS, registry, dialysis
