Session Title: PG Education 2 (Glomerular Disease)

Date & Time, Place: April 27 (Thu), 10:30 - 12:00, Room 3

Update of treatment of IgA nephropathy

Ho Jun Chin

Seoul National University Bundang Hospital, Korea, Republic of

IgA nephropathy is the most common glomerulonephritis in Korea. Treatment of IgA nephropathy is dependent on the clinical features such as amount of proteinuria, severity of hypertension, and degree of azotemia. During recent several years, there are controversy to use steroid treatment for IgA nephropathy. There are clinical trials for several new medications for IgA nephropathy, also. In this lecture, progression of IgA management tools are reviewed and new trials on going are also introduced.
