Session Name : Green Nephrology

Session Topic : Green Nephrology: Towards a Sustainable Future in Kidney Care

Date & Time, Place : June 12 (Fri) / 08:30-10:10 / Room 4 (203), 2F

KSN-Sustainable Kidney Care Committee Recommendations

Jihyun Yang

Kangbuk Samsung Hospital, Korea

The Korean Society of Nephrology has embraced the principle of "Green Nephrology" and launched campaigns addressing environmental sustainability in kidney care. These include initiatives to monitor resource usage, reduce waste generation in treatment facilities, and minimize dialysis-related environmental effects. The Society aims to raise awareness about the environmental impact of kidney disease and its treatments while emphasizing the importance of sustainable practices. Collaboration between health authorities and related academic societies is planned for the development of national strategies. The Special Committee on Sustainable Renal Treatment published the "Sustainable Kidney Care Recommendations," which provides guidelines for efficient measures to reduce the environmental footprint of dialysis. This effort aims to inspire systematic, practical, and sustainable healthcare solutions.
